

PROFESSIONAL SUMMARY

AWS Certified first-year Computer Science Engineering student at Jerusalem College of Engineering, executing a self-designed **1000-Day AI Cloud Infrastructure Engineering Journey**. Hands-on builder with practical experience architecting serverless, event-driven systems on AWS using Lambda, S3, API Gateway, IAM, and VPC. Passionate about designing scalable, secure, cloud-native infrastructure and actively developing skills in DevOps, Linux, Networking, and Cloud Automation — positioning for a long-term career in Cloud and AI Infrastructure Engineering.

SIGNATURE ENGINEERING INITIATIVE

1000-Day AI Cloud Infrastructure Engineering Journey

- Executing a self-designed 1000-day roadmap spanning AI Infrastructure, Cloud Computing, Linux, Networking, Cloud Security, Automation, and DevOps.
- Publishing structured daily technical logs documenting hands-on implementations and engineering progress.
- Maintaining a public GitHub repository tracking engineering growth through real-world projects and technical documentation.
- Continuously building cloud-native systems while strengthening AWS and infrastructure engineering depth.
- Demonstrating long-term consistency and technical commitment through publicly verifiable, daily progress.

CLOUD PROJECTS

Cloud-Morph

AWS Lambda · Amazon S3 · Serverless Architecture

- Built a serverless, event-driven file processing platform automating workflows for PDFs, CSVs, and text documents.
- Leveraged AWS Lambda + S3 to construct scalable, cloud-native pipelines with zero-server management.
- Designed for automation, elastic scalability, and cloud-native architecture principles.

Automated S3 Backup Tool

Python · Amazon S3

- Engineered a cloud backup solution using Python and S3 with MD5 hash / ETag-based intelligent sync.
- Reduced redundant transfers via incremental backup logic and integrated S3 lifecycle management.
- Embedded secure storage best practices and IAM-aware access patterns throughout.

FEATURED PROJECTS

JCE Attendance System

AWS · Python · JavaScript

- Designed a geolocation-based attendance platform with geofencing to eliminate proxy attendance fraud.
- Built secure student data management with cloud integration and scalability architecture.

Cryptexa

Python

- Engineered a crypto analytics platform separating market hype from underlying asset fundamentals.
- Delivered interactive visualizations and statistical signals for anomaly detection and market analysis.

JCE Community Chat

JavaScript

- Developed a real-time student communication platform with topic-based communities for placements, academics, and collaboration.
- Architected for future cloud-native and AI-powered enhancements with scalable design principles.

EDUCATION

Jerusalem College of Engineering

B.E. Computer Science & Engineering
First Year · Expected Graduation: 2029
Chennai, Tamil Nadu, India

CERTIFICATIONS

AWS Certified Cloud Practitioner

AWS Skill Builder

- Completed AWS Cloud Practitioner learning path
- Amazon S3-focused learning modules
- S3 Lifecycle Management & Storage Concepts
- Cloud Storage Security fundamentals

TECHNICAL SKILLS

Languages	Python, Java, C, C++
Cloud Platform	Amazon Web Services (AWS)
AWS Services	Lambda, S3, API Gateway, IAM, VPC
Concepts	Serverless, Event-Driven, Cloud Security, Infrastructure Automation
OS & Networking	Linux · TCP/IP · DNS · HTTP/HTTPS · Routing · Network Security
Tools	Git, GitHub

OPEN SOURCE & DOCUMENTATION

- Maintaining a public GitHub portfolio documenting AWS, Linux, Networking, IAM, and Cloud Security progress.
- Publishing structured engineering logs and technical write-ups as a learning-in-public practice.
- Building a long-term technical knowledge base through daily documentation.

LEADERSHIP & ENTREPRENEURSHIP

Student Entrepreneur

- Leading a student-led freelancing and web development initiative with peers.
- Developing practical leadership, client communication, and engineering collaboration skills.
